Community Health Needs Assessment Executive Summary

Providence Milwaukie Hospital
Providence Willamette Falls Medical Center

Creating healthier communities, together

As health care continues to evolve and systems of care become more complex, Providence is responding with dedication to its Mission and a core strategy to create healthier communities, together. Partnering with many community organizations, we are committed to addressing the most pressing health needs in our community. In the Portland metropolitan area, Providence is a proud member of the Healthy Columbia Willamette Collaborative, a public-private partnership that brings together 15 hospitals, four counties, and two coordinated care organizations to produce a shared regional needs assessment. The full, four-county assessment was completed July 31, 2016. This overview looks at findings for Clackamas County, which includes the service area for Providence Milwaukie Hospital and Providence Willamette Falls Medical Center.

Our starting point: Gathering community health data and input

Through a formal community health needs assessment process our collaborative identified 49 health needs in Clackamas County, including:

- 54 percent of adults are overweight or obese
- Cardiovascular disease is the leading cause of death
- Nearly 12 percent of survey respondents reported homelessness and lack of safe/affordable housing
- A high rate of alcohol use among teens, including binge drinking
- Nearly 18 percent of people are covered by the Oregon Health Plan (Medicaid)

Responding to the number of needs identified, Providence developed four topic categories: access to care; behavioral health; chronic conditions; and social determinants of health and well-being. These findings are guiding development of collaborative solutions to fulfill unmet needs for some of the most vulnerable groups of people in communities we serve. Our work is also informed by population demographics, which have been diversifying. For example, Clackamas County’s foreign-born population has increased more than 19 percent since 2005, and the Latino population has increased 74 percent from 2000 to 2010. The current population is about 395,000, which represents slightly over 11 percent growth since 2000.

Identifying top health priorities, together

Across the HCWC region, collected information included county public health data regarding health behaviors, morbidity, and mortality; hospital utilization and CCO data for the uninsured and members of the Oregon Health Plan; and community engagement activities that included listening sessions, literature review, and a community health survey. A detailed list is available from page 193 of the HCWC CHNA.
Providence top priority health needs for 2016-2018

2016 Community health measures (data from 2014-2016)

<table>
<thead>
<tr>
<th>Prioritized need</th>
<th>Clackamas County measures for 2016</th>
</tr>
</thead>
</table>
| Access to care                       | • Includes primary care and dental health services  
• A growing need for culturally and linguistically-appropriate services                                                                                                                                                                                                                                                                                           |
| Behavioral health                    | • Nearly 24 percent of adults have depression  
• About 6.7 percent of CCO-enrolled youth diagnosed with attention deficit disorder and 3.1 percent with post-traumatic stress disorder.  
• Need for timely and accessible substance use treatment services                                                                                                                                                                                                                                                                                      |
| Chronic conditions                   | • Nearly 60 percent of adults are overweight or obese  
• Hypertension and diabetes are top two reasons uninsured adults use the Emergency Department  
• Access to healthy, affordable food seen as part of a healthy community, as well as a priority identified need                                                                                                                                                                                                                                                                                 |
| Social determinants of health and well-being | • Recognized need for policies, systems, and environments that support healthy behaviors  
• Homelessness/lack of housing was the most frequently identified need  
• Unemployment and lack of living-wage jobs second-most identified need                                                                                                                                                                                                                                                                               |

Measuring our success: Results from our 2013 CHNA

This report also evaluates results from our most recent CHNA in 2013. Identified prioritized needs were: access to preventive and primary care; mental health and substance use treatment services; chronic conditions prevention and management; and oral health. Providence responded by making investments of time, resources and funding to programs that were most likely to have an impact on these needs. This summary includes just a few highlights from across the three-county Portland Service Area.

This assessment helps and guides our community benefit investments, not only for our own programs but also for many nonprofit partners. Please join us in making our communities healthier.
2016 Community Health Needs Assessment: Additional Information
The 2016 CHNA was conducted along with partners in the Healthy Columbia Willamette Collaborative. This partnership includes fifteen hospital, two coordinated care organizations, and four public health agencies in two states. The region covered includes Clackamas, Multnomah, and Washington counties in Oregon as well as Clark County, Washington. While Providence’s key findings are shared with those identified through the Collaborative assessment, this addendum provides additional information specific to Providence’s Portland Service Area regarding service area definition and action taken since the 2013 CHNA.

Service Area Definition
The Portland Service Area for Providence in Oregon includes primarily Clackamas, Multnomah, and Washington counties. Clark County, Washington is considered a secondary service area. Per Oregon Revised Statutes, service areas are based upon market share, patient origin ZIP codes, and other surrounding or embedded geographies. Providence has four hospitals in the Portland Service Area:

- Providence Milwaukie Hospital, a 77-bed hospital serving primarily northern Clackamas County
- Providence Portland Medical Center, a 483-bed hospital serving primarily Multnomah County
- Providence St. Vincent Medical Center, a 523-bed hospital serving primarily Washington County
- Providence Willamette Falls Medical Center, a 143-bed hospital serving central and eastern Clackamas County.

Additionally, Providence Medical Group has 29 clinics across the 4-county Portland metropolitan area.

Actions taken since 2013 CHNA
The culture of Providence supports caregivers being engaged in their communities in a variety of ways. This list is not exhaustive, but highlights several of the key activities taken to address the priority health needs identified in the 2013 CHNA across the Portland area.

Access to preventive and primary care
To address access to preventive and primary care, Providence has taken a multi-pronged approach. Internal programs include a robust medical residency program that includes a rural track option and operation of five negative margin clinics in the Portland area. These clinics provide much-needed services to the community despite operating at a loss. Providence continues its commitment to serving the poor and vulnerable by welcoming Medicaid, Medicare, and uninsured individuals. Financial assistance programs are available, as are certified insurance enrollment assisters for patients seeking assistance.

However, Providence recognizes that internal programs alone will not “solve” the problem of access given the magnitude of the need. Despite the seven hospitals and health systems present in the
Portland metro area, the need for access to care remains a challenge for many. Through partnership with others, Providence supports non-profit clinics and health centers to see more patients and improve the quality of care delivered. Supported Federally-Qualified Health Centers (FQHCs) include Virginia Garcia in Washington County, Neighborhood Health Center in Clackamas and Washington counties, and Wallace Medical Concern in Multnomah County. Virginia Garcia serves nearly 8,000 patients per year at their Beaverton clinic, which is in the process of expanding to increase its capacity. Neighborhood Health Center has moved their Washington County location to Tanasbourne to expand access, including the addition of nine dental chairs and capacity for 1,400 new patients for integrated primary and behavioral health services. Wallace Medical Concern has also expanded services and partnered with Human Solutions to build new affordable housing units and relocate their administrative space, opening up more space for patient rooms.

In a unique partnership, Providence and Kaiser Permanente NW awarded funds to nine Community Supported Clinics for capacity-building and board development. This is a two-year initiative focused on supporting these clinics to remain viable in the post-ACA healthcare environment or begin the process of transitioning to FQHC “look-alikes”. A key community partner in access efforts is Project Access NOW, which began prior to Medicaid expansion with the goal of connecting patients in need with physicians and health systems that were willing to provide pro-bono care. Their programs have now expanded to include premium support as well as outreach and enrollment for insurance efforts. Funding partners include all health systems and hospitals in the Portland metro area. The premium support program is targeted for individuals with chronic conditions who are between 139 and 200 percent FPL and has thus far helped 198 households maintain insurance coverage.

**Mental health and substance use services**

Again, Providence has invested in internal change and supported external programs and partners to increase access to mental health and substance use services across the Portland Service area. Internal programs include the integration of behaviorists in primary care clinics and continued operation of a behavioral health and chemical dependency services program. Other internal programs developed since 2013 include a geriatric psychiatry program at Providence Milwaukie Hospital with 19 in-patient beds as well as the Child and Adolescent Psychiatric Unit at Providence Willamette Falls Medical Center, providing 6 beds for children and 16 for adolescents. Providence Portland Medical Center operates 33 adult in-patient mental health beds and 20 adult detox beds, and Providence St. Vincent has 33 adult inpatient psychiatric beds. Providence Portland and Providence St. Vincent also operate adult outpatient and intensive outpatient mental health services.

Providence also supports other organizations in the community to provide mental and behavioral health services. One unique program is supporting Mental Health Association of Oregon to embed a peer support specialist and trained doula in Providence’s Milwaukie Family Medicine clinic. The peer support specialist is available to pregnant women and mothers who are high-risk due to drug or substance dependency, particularly opiates and provides one-on-one support as well as group sessions throughout the course of pregnancy and through delivery. Other community-based programs that Providence supports include Central City Concern, LifeWorks NW, NAMI Oregon, and NAMI SW Washington. Central City Concern has operated the Recuperative Care Program for several years, and in 2016 initiated plans
to further expand services by adding 386 units of affordable housing, including a new Eastside location that will be an integrated health and wellness center. LifeWorks NW operates relief nurseries and family support programs for women of color through Project Network as well as prevention, mental health, and substance use services. Providence supports NAMI in Oregon as well as SW Washington to provide their family-to-family and mental health first aid trainings.

Other funded community programs in partnership with public health partners include Tri-County 911 through Multnomah County Health Department, and a mental health and media campaign through Clackamas County to reduce stigma related to mental health in adolescents. Tri-County 911 has been supported by the local coordinated care organizations for Oregon Health Plan members, and Providence’s funding has been used to provide case management and outreach services to frequent EMS utilizers who remain uninsured.

**Chronic conditions prevention and management**

In addition to expanding access to primary care as discussed above, Providence has also engaged directly in increasing opportunities for chronic prevention and management. While most of these services are provided through primary care, Providence Milwaukie Hospital opened a new food pharmacy and community teaching kitchen for individuals with diet-related chronic conditions. The food pharmacy is available to Providence providers as well as those from nearby NW Primary Care Associates and Neighborhood Health Center. It is staffed by a registered dietician who provides cooking classes and instructions for preparing meals, regardless of whether a family is cooking on a hot-plate or in a gourmet kitchen. Providence has also piloted the universal Screen-and-Intervene protocol for food security in two clinics and is seeking to expand it, and its embedded connection to resources, to others. Providence also operates a parish-based health promotion program, or *Promotores*. These are lay community health workers, some of whom have been certified per the State of Oregon curriculum that provide movement and wellness classes for the Latino community. The *promotores* also offer the Tomando Control program, the Spanish-language translation of Stanford’s Living Well with Chronic Disease curriculum as well as offer telehealth clinics that have provided screenings for over 363 Latinos and 87 telehealth visits with a nurse practitioner. Providence also operates a Program for All-inclusive Care for the Elderly (PACE) through ElderPlace, which increases access to care and improve quality of life for seniors.

External partners addressing chronic conditions include Impact NW, Partners for a Hunger-Free Oregon, and Project Access NOW. Impact NW runs the Community Resource Desk, which began as a pilot at two high needs clinics in Multnomah County in 2014. They are co-located in the clinics where they provide services, and in the first two years served over 1,800 unique individuals with connection to basic needs and other resources. In October of 2016, the Community Resource Desk expanded to western Washington County with Impact NW as the implementing partner, and we plan to open a desk in Clackamas County in 2017. Partners for a Hunger-free Oregon has been a policy partner related to many income- and food-related challenges, such as Oregon’s elimination of the “co-pay” for reduced price lunches through the Free and Reduced Lunch program. They support summer meal sites across the state that in 2015 provided over 322,000 meals to 7,000 children. Providence has provided financial support for program operations, summer meals sites, and technical assistance through the Center for Outcomes Research and Education (CORE). Providence piloted and co-developed a referral platform with Project
Access NOW for their Community Care Connections program. At Providence, this is called the “Patient Support Program” and began as a pilot to provide safe and secure discharge for patients for the first 30 days. The platform is now being used by other providers and hospitals across the Portland area. This program is currently hospital-based, but there is opportunity for the program to expand to pilot clinic sites by 2018.

**Oral health services**

While Providence is not a traditional oral health provider, it operates a pediatric specialty dental clinic as part of the Providence Child Center at Providence Portland Medical Center. This is a clinic that provides dental care for children with special needs across the metro area, including residents at the Child Center. Two clinics have piloted the First Tooth dental sealant program for pediatric patients, which includes the application of fluoride varnish to prevent dental caries in children.

External partners addressing oral health services include Medical Teams International, Neighborhood Health Center, Oregon Community Foundation’s Children’s Dental Health Initiative, and the Oregon Oral Health Coalition. Medical Teams International operates mobile dental vans that serve over 1,000 patients per year. They provide oral health services primarily for the uninsured, but with Medicaid expansion have increased access to include members who are unable to get a dental appointment. Providence is a funding partner in the Oregon Community Foundation’s five-year Children’s Dental Health Initiative in 2014, which provided funding for 15 programs to expand access to oral health prevention programs for youth across Oregon. As noted in the Access to care section, Providence has also supported Neighborhood Health Center to expand programs in Washington County to include nine new dental chairs, and welcomed the Joseph Bernard Dental Clinic, which is co-located on the campus of Providence Milwaukie Hospital.
Providence’s Portland Service Area Advisory Council has reviewed and approved the findings of the 2016 Community Health Needs Assessment.

Providence Milwaukie Hospital
10150 SE 32nd Avenue
Portland, OR 97222
TO OUR COMMUNITY MEMBERS,

It is with great pleasure that we present the findings of our Community Health Needs Assessment and resulting Community Health Improvement Plan. Over 160 years ago, the Sisters of Providence came to the Northwest with the goal of addressing the most pressing needs of the time. Today, through their Hopes and Aspirations document, the Sisters call us to “be open to the call of those who suffer by addressing emerging needs with wise and discerning responses”. Providence is pleased to partner with many agencies in our communities to address the most pressing health and social determinant needs in each of our service areas. We are uniquely positioned to use our role as a primary, acute, and specialty care provider, insurer, and the largest employer in the state to truly impact the health of our communities.

We are grateful for the partnership of community organizations, survey respondents, listening session participants, interviewees, and many others in the development of these needs assessments and plans. We know that addressing these challenges will require long-term commitment, systemic change, and expertise outside of the health system. Our communities have many strengths, and it is our privilege to support programs and organizations actively addressing these needs, as well as generating momentum to think differently about these services within our own organization.

Finally, let us thank you for your interest in reviewing this plan and engaging in our community health improvement efforts. We believe that this work is central to our strategic vision of creating healthier communities, together.

Sincerely,

Pamela Mariea-Nason, RN, MBA
Executive, Community Health Division
Providence Health & Services – Oregon
Executive summary

**PURPOSE**

This Community Health Improvement Plan is based upon the Community Health Needs Assessment conducted by Healthy Columbia Willamette Collaborative (HCWC), which serves the four-county region of the Portland Metropolitan area. This plan is specifically designed to serve the northern Clackamas County area, which is Providence Milwaukie Hospital’s primary service area. Each of these interventions will be prioritized based upon relative needs and opportunities, particularly those that serve identified high needs ZIP codes and neighborhoods.

This plan is intended to serve as a guiding document for community investment, community building and development, and community health efforts through 2019. This plan will be reviewed and updated annually or as needed to recognize new partners, initiatives, efforts, and metrics as they are available. Importantly, this plan is not intended to be an exhaustive inventory of all of Providence’s efforts to address these needs. Rather, this document highlights those efforts that are measurable and community-based. This plan should be reviewed in conjunction with our annual Community Benefit report, which will provide additional narrative and will be updated in June of each year.

**SUMMARY OF PRIORITIZED NEEDS AND ASSOCIATED ACTION PLANS**

While HCWC identified 49 specific health related needs in Clackamas County, Providence has grouped these needs into thematic categories and identified specific focus areas within those categories:

**ACCESS TO CARE**
- Primary care
- Dental care
- Culturally-responsive care

**BEHAVIORAL HEALTH**
- Mental health services
- Substance use treatment
- Trauma/adverse experience prevention and building resilience

**CHRONIC CONDITIONS**
- Diabetes
- Hypertension
- Obesity (particularly amongst youth and adolescents)

**SOCIAL DETERMINANTS OF HEALTH AND WELL-BEING**
- Affordable housing
- Healthy food access
- Living wage jobs
- Transportation

Many of these needs will be directly addressed through internal initiatives and community investment initiatives over the next three years. You will find additional information about our specific tactics and metrics in the following sections.
Introduction

CREATING HEALTHIER COMMUNITIES, TOGETHER

As health care continues to evolve, Providence is responding with dedication to its Mission and a core strategy to *create healthier communities, together*. Partnering with others of goodwill, we conduct a formal community health needs assessment to learn about the greatest needs and assets from the perspective of some of the most marginalized groups of people in communities we serve. This assessment helps us develop collaborative solutions to fulfill unmet needs while continuing to strengthen local resources. It guides our community benefit investments, not only for our own programs but also for many partners, toward improving the health of entire populations. Through strategic programs and donations, health education, charity care, medical research and more, Providence Health & Services provided over $1.1 billion in community benefit across Alaska, California, Montana, Oregon and Washington during 2016.

Serving our communities

About us

Providence Health & Services is a not-for-profit Catholic health care ministry committed to providing for the needs of the communities it serves – especially for those who are poor and vulnerable. Providence's combined scope of services includes 34 hospitals, 475 physician clinics, senior services, supportive housing and many other health and educational services. The health system and its affiliates employs more than 76,000 people across five states – Alaska, California, Montana, Oregon and Washington – with its system office located in Renton, Washington. Our community health activities are rooted in the charitable work the Sisters of Providence started nearly 160 years ago when they answered a call for help from a new pioneer community in the West.

**Mission**

As people of Providence, we reveal God’s love for all, especially the poor and vulnerable, through our compassionate service.

**Vision**

Together, we answer the call of every person we serve: Know me, Care for me, Ease my way.®

**Values**

Respect, Compassion, Justice, Excellence, Stewardship
Purpose of this plan

In 2016 Providence Milwaukie Hospital conducted a community health needs assessment as a member of the Healthy Columbia Willamette Collaborative (HCWC). This community health improvement plan is designed to address key health needs identified in that assessment. The prioritized needs were chosen based on community health data and identifiable gaps in available care and services. In the course of our work, we determined that emphasis on these needs would have the greatest impact on the community’s overall health with significant opportunities for collaboration. These are:

Our overall goal for this plan

As we work to create healthier communities, together, the goal of this improvement plan is to measurably improve the health of individuals and families living in the areas served by Providence Milwaukie Hospital and across the Portland metropolitan area. The plan’s target population includes the community as a whole, and specific population groups including minorities, low-income, and other underserved demographics living in high needs areas.

This plan includes components of education, outreach, prevention, and treatment, and features collaboration with other community organizations working in alignment with the Providence Mission to address these identified needs. The plan’s implementation will be facilitated by the hospital through the regional Community Health Division, hospital executive leadership, and members of the Service Area Advisory Council.

This plan is intended to serve as a guiding document for community investment, community building and development, and community health efforts through 2019. It will be reviewed and updated annually or as needed to recognize new partners, initiatives, and metrics as they are available. Importantly, this plan is not intended to be an exhaustive inventory of all of Providence’s efforts to address these needs. Rather, this document highlights those efforts that are measurable and community-based. This plan should be reviewed in conjunction with our annual Community Benefit report, which will provide additional narrative and will be updated in June of each year.
Community Profile
Clackamas County, Oregon

Providence Milwaukie primarily serves residents of northern Clackamas County in Oregon. Providence has one other hospital serving other parts of Clackamas County, two hospitals serving neighboring Multnomah and Hood River counties, and four additional hospitals around the state.

POPULATION AND AGE DEMOGRAPHICS

The current population of Clackamas County is nearly 395,000, which represents slightly over 11 percent growth since 2000. Clackamas County has been diversifying, with the foreign-born population increasing more than 19 percent since 2005, and the Latino population increasing nearly 74 percent from 2000 to 2010.

The age distribution is fairly normal, with the male-to-female ratio being approximately 1:1 until age 65, when females become a greater proportion of the population. This difference is clearest over the age of 85, where there are nearly 2 surviving females for each male. There is a greater proportion of adults over age 65 in Clackamas County compared to other counties in the Portland metro area.
ETHNICITY

Among Clackamas County residents in 2016, 91.5 percent identified as White non-Hispanic, 8.5 percent were Hispanic or Latino, 4.3 percent Asian or Pacific Islander, less than 1 percent were African American or Black, less than one percent were Alaska Native or American Indian, and nearly 3 percent identified as two or more races.

INCOME

In 2015, the median household income for Clackamas County was $65,965, which is nearly $10,000 higher than neighboring Multnomah County. Clackamas County is home to some of the wealthiest areas in Oregon, such as Lake Oswego, as well as more rural areas such as Estacada. Clackamas County’s unemployment rate was 3.7 percent in December 2016. The state’s overall unemployment rate was 4.5 percent, compared to the national average of 4.7 percent at the same time.

HEALTH AND WELLBEING

In Clackamas County, nearly 54 percent of adults are overweight or obese, as are 26.1 percent of eighth grade students and 29.5 percent of eleventh grade students. Diabetes and hypertension remain the top two reasons uninsured adults access the Emergency Department for conditions that could be managed in primary care settings, and cardiovascular disease is the leading cause of death. Nearly 24 percent of adults have depression.
SUMMARY OF PROVIDENCE PRIORITIZED NEEDS
AND ASSOCIATED ACTION PLANS

In the Portland Metropolitan area, Providence is a proud member of the Healthy Columbia Willamette Collaborative (HCWC), a public-private partnership that brings together 15 hospitals, four counties, and two coordinated care organizations to produce a shared regional Needs Assessment. The complete assessment for the four-county Region was completed July 31, 2016. Across the HCWC four-county region, collected information included county public health data regarding health behaviors, morbidity, and mortality; hospital utilization and CCO data for the uninsured and members of the Oregon Health Plan; and community engagement activities that included 29 listening sessions, a literature review, and a community health survey with over 3,600 responses. A detailed list is available from page 193 of the full CHNA (available here).

The prioritized needs were chosen based on community health data and identifiable gaps in available care and services. In the course of our work, we determined that emphasis on these needs would have the greatest impact on the community’s overall health with significant opportunities for collaboration. These interventions will be prioritized based upon relative needs and opportunities, particularly those that serve identified high needs ZIP codes and neighborhoods including low-income and minority populations.

ACCESS TO CARE

• Timely and consistent access to primary care remains a challenge, particularly for those on the Oregon Health Plan (Medicaid) and the remaining uninsured.
• Dental conditions are among the top preventable reasons uninsured individuals access the Emergency Department, which is rarely the best point of care for these conditions. This presents opportunity for prevention education and increasing access to preventive services.
• As the population is diversifying, it is increasingly important that community members feel welcome, safe, and respected in healthcare settings. One of the greatest opportunities to improve health amongst low-income and minority communities is to increase access to culturally-responsive care.

BEHAVIORAL HEALTH

• Mental health services remain a barrier for many community members. There is need to reduce stigma associated with mental health treatment and increase availability of providers and treatment services. This is particularly true amongst youth and adolescents, presenting opportunities to partner with school-based health centers.
• Access to substance use treatment continues to be a challenge for many. This includes alcohol and drug addiction services, both residential and outpatient treatment options. Oregon has relatively high rates of death from drug overdose, drug use (heroin, methamphetamines, and narcotics), and binge drinking.
• As we continue to learn about adverse childhood experiences (ACES) and the impacts of trauma on health later in life (i.e. child abuse, neglect, domestic violence, sexual assault, etc), increasing community resilience and preventing exposure to these events in the first place has become increasingly important.
CHRONIC CONDITIONS

- **Diabetes** continues to be one of the top reasons uninsured adults seek care in an Emergency Department, though the condition is likely better managed in a primary care setting. This suggests opportunities regarding prevention, education, and nutrition support.
- Similarly, **hypertension** is among the top three diagnosed conditions in uninsured adults using the Emergency Department. The fact that emergency care was required suggests need for primary care, education regarding self-management, medication access, and nutrition support.
- **Obesity** is a public health challenge, for both youth and adults. The current generation of youth may be the first to have a shorter life expectancy than their parents due to complications from obesity and its associated conditions.

SOCIAL DETERMINANTS OF HEALTH AND WELL-BEING

- **Affordable housing** (or housing accessibility) is a major challenge for low and moderate income families in the area, particularly for those in recovery. Housing and rental prices are increasing faster than the median income, making it difficult for people to stay close enough to their places of employment, care, and children’s school. Safe, secure housing has been proven to improve health outcomes.
- A key barrier for many of Oregon’s families continues to be **healthy food access**. More than half of the state’s students are on free or reduced price lunch, with some school districts in Clackamas County serving populations where over 40 percent of the students qualify. Improvements in nutrition can further improve oral health and chronic conditions.
- Economic development and **living-wage jobs** are key opportunities to improve the health and well-being of our communities. Families expressed concern about working full-time or multiple jobs and still not being able to afford healthy food or housing. Adverse experiences and trauma are more likely in low-income households, particularly those in which the parents are stressed about resources. This also speaks to the challenge in Oregon of the “benefits cliff,” whereby families lose many of their social service benefits at the same point.
- **Transportation** is a challenge for some populations, particularly for the elderly and those in more rural areas. Many are homebound or dependent on others for rides to work, medical appointments, or other basic errands.
ACCESS TO CARE

Goals

- Community members will have improved access to timely, consistent primary care
- Community members will experience more accessible preventive and primary dental care and improved oral health
- Community members will receive healthcare services in a culturally-responsive and welcoming setting

Objectives

- Providence Medical Group will continue to provide care for over 25,000 Oregon Health Plan members in the Portland Metropolitan area.
- Support community-supported clinics, federally-qualified health centers, and school-based health centers to extend hours and services to support primary care access.
- At least 400 individuals with chronic conditions will receive support to purchase a silver-level plan on the health insurance exchange through the Premium Support Program annually.
- More school-aged youth will have access to dental care through comprehensive school-based dental programs.

BEHAVIORAL HEALTH

Goals

- Community members will have increased access to timely and affordable mental health treatment, including supportive services and therapy
- Stigma associated with mental health and substance use will be reduced
- Community members will have improved access to substance use treatment when needed, including residential or outpatient services as appropriate
- Fewer children will experience abuse, neglect, racism, discrimination, and other adverse experiences that are harmful throughout life and negatively impact health outcomes. Adults with traumatic experiences will be supported in their recovery through resilient communities.

Objectives

- At least three Mental Health First Aid trainings will be provided each year in a train-the-trainer model
- Partner with Trillium Family Services to decrease stigma associated with mental health conditions in high schools through social media campaign involving at least four school districts by 2018
- All providers will have access to trauma-informed care training; at least 80% of Emergency Department providers will have received training in trauma-informed care by December 2019
- Pregnant women experiencing addiction will be supported through their pregnancy and post-partum with peer support programs to improve birth outcomes
- Elderly psychiatric patients will have improved access to specialized care

**CHRONIC CONDITIONS**

**Goals**

- Community members will have improved access to education and self-management curriculums for chronic disease in both English and Spanish
- Chronic disease burden will be reduced, particularly within communities of color
- Community members will have increased opportunity for physical activity and nutritious eating, particularly youth and adolescents

**Objectives**

- Emergency department utilization for chronic conditions, particularly diabetes and hypertension, will be reduced through increased access to primary care and meeting social determinant needs
- Patients with diagnosed conditions will have access to chronic condition self-management education
- Individuals with diagnosed chronic conditions will have unmet social needs addressed as part of care
- More youth will report adequate physical activity and healthy behaviors due to Providence’s Healthier Kids, Together Initiative

SOCIAL DETERMINANTS OF HEALTH AND WELL-BEING

Goals

- Community members will have improved access to safe, stable housing
- Community members will have increased access to affordable healthy food
- Community members will be able to support themselves and their families on one full-time job (or equivalent)
- Community members, particularly elderly and those in rural communities, will have access to convenient, frequent public transit or ride share services

Objectives

- Increase affordable housing stock by at least 385 units, including recuperative care, permanent housing, and family units by 2018
- Implement food security screening questions at 50% of family medicine and pediatric clinics by 2019
- Implement community partner referral system in Epic and pilot with at least two clinics
- Provide safe and secure discharge for at least 2,000 individuals needing short-term social service support annually
- Fewer working families will report having to work multiple jobs to make ends meet
- Fewer elderly adults and community members will recognize transportation as a barrier to receiving needed primary care and safe discharge
- Community members and providers will have increased awareness of available social service resources
- Social service agencies and healthcare will be better connected through the Regional Social Determinants of Health Network

Healthier Communities Together

As outlined, Providence is working to address each of the identified needs in a variety of ways over the next three years. That said, it is important to note that some of this work will be completed in more indirect ways than others. To address systematic issues, like living wage jobs, Providence will work with a diverse coalition of stakeholders to move this issue forward. Utilizing our relationships with elected officials, business leaders and union representatives – we are well positioned to promote public policy changes that support Oregon families.

Although the built environment was not specifically called out, we recognize that it is an important component of the health and well-being of our communities. Our priority areas and initiatives were selected based on our findings from relevant data, conversations with people living in our community and the opportunities we have to make marked improvements in the coming years. We will seek out opportunities to support local jurisdictions and community organizations focused on access to safe parks, pedestrian and bicycle-friendly transportation, and other components of the built environment that lead to improved health outcomes.

Providence cannot address the significant community health needs independently. Improving community health requires collaboration across community stakeholders. Below outlines a list of community resources potentially available to address identified community needs.
