\(^1\) A community benefit is an initiative, program or activity that provides treatment or promotes health and healing as a response to identified community needs and meets at least one of the following community benefit objectives:
- a. Improves access to health services;
- b. Enhances public health;
- c. Advances increased general knowledge; and/or
- d. Relieves government burden to improve health.

*Note: Community benefit includes both services to the economically poor and broader community.*

\(^2\) To be reported as a community benefit initiative or program, **community need must be demonstrated**. Community need can be demonstrated through the following:
1) community health needs assessment developed by the ministry or in partnership with other community organizations;
2) documentation that demonstrates community need and/or a request from a public agency or community group was the basis for initiating or continuing the activity or program;
3) the involvement of unrelated, collaborative tax-exempt or government organizations as partners in the community benefit initiative or program.
MESSAGE TO THE COMMUNITY

The health of a community can be measured by the willingness of its members to support those in need. Providence Health Care continues a vibrant history of serving our communities’ needs for more than 130 years. Our Mission calls us to care for everyone, especially those who are poor and vulnerable. Providence reaches beyond the clinical setting to meet the needs of our communities today, while improving conditions for a better tomorrow.

When the Sisters of Providence arrived in Eastern Washington they partnered with members of the community to provide healing and comfort to thousands of individuals, promote human dignity and improve the communities they served. The Sisters relied on others for help to achieve the Providence Mission.

Similar to those early days, Providence cannot improve the health of our community on our own. That’s why we partner with community organizations to identify the greatest areas of unmet needs in the communities we serve through a community health needs assessment. The solutions are then reflected in community health improvement plans.

I invite you to learn more about this important work by reading our Community Health Needs Assessment approved on September 25, 2019 date, by the Providence Health Care Community Ministry Board governing body. It is our calling and privilege to work together to build healthy communities.

Elaine Couture
ACKNOWLEDGEMENTS

Collaborative Partners
Providence Health Care in Stevens County partnered with the Northeast Tri County Health District and Spokane Regional Health District. Northwest Tri County Health District received a State grant to conduct more in-depth health needs assessments in rural communities.

Northeast Tri County Health District
Northeast Tri County Health District works with other entities to assess, protect, preserve and promote the health of the tri-county area and establishes local policy relating to populations based services in Ferry, Pend Oreille and Stevens Counties.

Spokane Regional Health District
Spokane Regional Health District is one of 34 local public health agencies serving Washington state's 39 counties. The agency was originally established as the Spokane County Health District in January 1970, when the City of Spokane and Spokane County merged their health departments. In 1994, the official name was changed to Spokane Regional Health District to reflect the increased scope of public health services and geographic coverage. We have approximately 250 employees and serve a population of more than 400,000 in Spokane County.
WHO WE ARE
The Sisters of Providence, led by Mother Joseph, opened Sacred Heart Hospital more than 130 years ago in 1886 on the banks of the Spokane River. The acute-care hospital has 719 (559 SH + 160 SHCH) licensed beds, 684 of which are currently available, and a campus that is several city blocks in size.

Providence Mount Carmel Hospital was founded in 1919 to meet the health care needs of the small community of Colville. Nearly 100 years later, the community and its hospital have grown, and it continues to serve the needs of our friends and neighbors. From 24-hour emergency care, to surgery services, to labor and delivery, the team at Providence Mount Carmel Hospital offers services that you would expect at a big-city hospital—right here in Colville.

Providence St. Joseph Hospital was founded by the Dominican Sisters in 1929 to meet the health care needs of the small community of Chewelah and surrounding communities in Stevens County. Nearly a century later, the hospital continues to serve the needs of our friends and neighbors. From 24-hour emergency care, to acute care/skilled care services, the team at Providence St. Joseph’s Hospital provides the convenience of a home-town hospital.

Providence Health Care in Stevens County consists of the Providence Northeast Washington Medical Group, Providence Mount Carmel Hospital, Providence St. Joseph’s Hospital, and Providence DominiCare; serves the tri-county area (Stevens, Ferry, and Pend Oreille counties). Providence Northeast Washington Medical Group consisting of the main clinic and Garden Homes Specialty Clinic in Colville, Family Medicine Chewelah Clinic in Chewelah, and Kettle Falls Clinic in Kettle Falls.

Combined, Providence Health Care employs more than 8,000 health care professionals. Providence Medical Group employs more than 800 physicians and advanced practitioners with more than 60 clinic locations. Providence has numerous relationships with physician groups in the community including Cancer Care Northwest, Inland Neurosurgery and Spine, Spokane OBGYN and more.

OUR COMMITMENT TO COMMUNITY
Organizational Commitment
Providence Mount Carmel Hospital and Providence St. Joseph Hospital dedicate resources to improve the health and quality of life for the communities it serves, with special emphasis on the needs of the economically poor and vulnerable. During 2018, our Spokane and Stevens County ministries provided more than $143.8 million in community benefit in response to unmet needs and improve the health and well-being of those we serve in Spokane and Stevens counties.

Our region includes: Providence Health Care is the eastern Washington region of Providence Health & Services. Our network of services includes Providence Sacred Heart Medical Center, Sacred Heart Children’s Hospital and Providence Holy Family Hospital, nationally recognized for quality care. We also have two critical access hospitals, Providence Mount Carmel Hospital in Colville and Providence St. Joseph Hospital in Chewelah. A full continuum of services are provided through the Providence Medical Park in Spokane Valley (a comprehensive multi-specialty center), three urgent care centers, home health, assisted living, adult day health and skilled nursing care. Providence Medical Group of Eastern
Washington includes more than 800 physicians and advanced practitioners, including primary care providers, surgical subspecialists and medical specialists.

As a result of the 2019 CHNA process, the following will be accomplished:
- Develop an informed understanding of the health-related needs that exist within our local hospital service areas, zip code and county level;
- Ensure we capture the voice of the community;
- Develop an inventory of community assets, or resources, that currently exist in the community that can be used to help address community needs; and
- Inform the development of the 2019-2021 Community Health Improvement Plan (CHIP)

MISSION, VISION, AND VALUES

Our Mission
As expressions of God’s healing love, witnessed through the ministry of Jesus, we are steadfast in serving all, especially those who are poor and vulnerable.

Our Vision
Health for a Better World.

Our Values
Compassion
Dignity
Justice
Excellence
Integrity
OUR COMMUNITY

Description of Community Served
Providence Mount Carmel Hospital and Providence St. Joseph Hospital provides Stevens county communities with access to advanced care and advanced caring. The visual below shows the county lines. All people within the county were taken into consideration regardless of ability to pay. This includes a population of approximately 45,030 people, an increase from 44,030 from the previous assessment.

Community Profile

Population and age demographics
Total population is about 45,030, with an annual growth rate of about 1.1 percent in 2017. Compared to the State as a whole, Stevens County has a greater proportion of adults aged 65 and older. In 2017 the population comprised:

Race / Ethnicity and Language Spoken at Home
Overall we are not as diverse as the State but we are seeing a growing trend in migration to Stevens. We are seeing a plethora of languages spoken at home. Among Stevens County residents in 2017:
Education, Income, and Housing

In 2017, the median household income for Stevens County was $53,245, and the unemployment rate was 7.3 percent. An increase from 6.3 percent from our last needs assessment. 29 percent of the community has households with income below the federal poverty level, and 17.2 percent of children and 8.8 percent of older adults live at or below the poverty level. The median household income has increased and percentage of the population living under the federal poverty level has increased since the last needs assessment. In Stevens County, 1.6 percent of occupied housing lacked complete plumbing facilities and 1.8 percent lacked complete kitchen facilities. Compared to 0.4 percent of occupied housing in Washington State. 90 percent of our population 25 and older has a high school degree or equivalent or more education. Stevens County has less of the population with Bachelor degrees or higher than the State average.

**Health Care and Health Access**

The share of Stevens County residents who are uninsured was 10.3 percent in 2016. This is a decrease from 15.3 percent in 2009. This is slightly higher than the overall share of Washington State, at 9.8 percent. American Indian/Alaskan Native populations in Stevens County are more likely to be uninsured than elsewhere in the state.

Source: [http://countyhealthinsights.org/county/stevens/indicators/indicators-64105/](http://countyhealthinsights.org/county/stevens/indicators/indicators-64105/)
Health and Wellbeing
In Stevens County, 26 percent of youth and 40 percent of adults are overweight or obese. During 2016, the top-four causes of hospitalizations were:

- 11.2% for unintentional injuries, increasing from 9.0% in 2006.
- 11.3% for heart diseases, decreasing from 13.8% in 2006.
- 10.7% for digestive system diseases, decreasing from 11.2% in 2006.
- 8.9% for respiratory diseases, decreasing from 13.2% in 2006.

OVERVIEW OF COMMUNITY HEALTH NEEDS ASSESSMENT (CHNA) FRAMEWORK

In October 2018 representatives from Providence Health Care contacted staff from the Northeast Tri County Health District and the Spokane Regional Health District to begin planning for the 2019 needs assessment. There is a significant desire for the community to come together for one communitywide in-depth needs assessment, in which health would be one factor.

METHODOLOGY: DATA COLLECTION PROCESS AND PARTICIPANTS

Providence strives for the intersection of Community-level data, Hospital- level data, and Qualitative data gathered from the community in our data gathering efforts.

Data pulled from various resources including the Healthy Youth Survey, BRFSS, census data, federal, state and local data sources are included in the Indicators Summary for Stevens County.
Providence Health Care partnered with the Tri County Health District and the Spokane Regional Health District to conduct the 2019 community needs assessment using the most recent data available. The purpose was to prioritize the needs of the community, especially among those living in poverty and with the least access to resources, and to promote collaborative opportunities to improve health and well-being in Stevens County. 192 responses were collected as a convenience sample in partnership with Rural Resources. 52 indicators were analyzed and 5 focus groups were held in Colville, Chewelah, Kettle Falls, Northport and Springdale.

Providence Health Care reached out additionally to various community groups for survey information. A total of 89 surveys were received from staff of Providence, the unemployed, retired, independent physicians, employees of Rural Resources, members of the Hunger Coalition, as well as those who did not wish to disclose for their own reasons. These surveys included questions related to community member’s perception of health. (See Appendix 1 for a summary of findings).

Providence Health Care held additional focus groups in Northport, Kettle Falls, Chewelah and Colville to gather community input from a diverse group of community members. Participants were encouraged to consider root causes or closely correlating factors behind the indicators identified by the Health District assessment. Participants were asked to vote on their top Health Concern, top Concern Affecting Health, and top Health District indicator. Votes were tabulated and the top three priorities from each committee were brought forward. (See Appendix 1 for participants).

**Collaborative Partners**
Northeast Tri County Health District
Spokane Regional Health District
Rural Resources
Northeast Washington Hunger Coalition
Stevens County Health Roundtable

**Secondary Data**
Data reviewed by the community and used to prioritize the community needs can be found at the following website: [http://countyhealthinsights.org/county/stevens/indicators/indicators-64105/](http://countyhealthinsights.org/county/stevens/indicators/indicators-64105/).

**Primary Data**
There were two sources of primary data, community input and in-hospital data.

**Community Input:**
Surveys and focus groups were utilized to obtain the voice of those working and living in our community that were sent out in January 2019 and were collected over the next three months. During this time, the local health district was also pulling together focus groups in various towns in the tri-county area. Multiple meetings were set for each focus group to gain input from various communities throughout the month of April 2019. These were held during the evening to allow for the working poor and low income to attend. We also targeted organizations who work with the low income, minority
populations and medically underserved to invite their clients to the focus groups. A summary of direct community input can be found in Appendix 1, including a list of those who participated.

**In-Hospital Data:**

Data was also pulled from our hospital medical record system to view trends for the calendar year 2018. We asked the question of what data would show us the needs of the vulnerable in our community. We pulled data for the percent of avoidable Emergency Department cases, top reasons for hospital utilization, and the prevalence of all self-harm instances.

![Pct Avoidable ED Cases](chart)

Providence Saint Joseph Health implemented a standard definition of Avoidable Emergency Department (AED) visits based on research and standards from New York University and Medi-Cal. This graph shows the trend in patient percentages that meet the definition of avoidable Emergency Department utilization at both Providence Mount Carmel Hospital and Providence St. Joseph Hospital between January 2018 and December 2018.

The data shows a decline in avoidable Emergency Department utilization at Providence St. Joseph Hospital and an increase at Providence Mount Carmel Hospital. Between May 2018 and April 2019, 32.3 percent of emergency department visits at Mount Carmel Hospital were potentially avoidable, as were 32.9 percent of emergency visits at Providence St. Joseph Hospital.

**Prevention Quality Indicators**

The Prevention Quality Indicators (PQIs) are defined by the Agency for Healthcare Research and Quality (AHRQ) as a “set of measures that can be used with hospital inpatient discharge data to identify quality of care of ambulatory care sensitive conditions,” or indicate potentially avoidable
inpatient admissions that could have been treated or managed in an outpatient setting and provide important insight into the community health care system\(^3\).

Prevention Quality Indicators (Per 1,000 Inpatient Discharges) by Hospital Facility in 2018 were pulled based on individual hospital utilization. It was then narrowed to reflect the issues where the Stevens County hospitals had a higher rates than the Providence Washington/Montana average.

<table>
<thead>
<tr>
<th>Prevention Quality Indicator</th>

<td>9.03</td>
<td>*</td>
<td>5.22</td>
</tr>
</tbody>
</table>

The highest Medicaid utilization for Providence Mount Carmel Hospital out of these are Diabetes Short Term and Uncontrolled Diabetes. Heart failure is the highest among those aged 75 or older and those with Medicare insurance. Urinary Tract Infections are also most prevalent among the 75+ age range and Medicare beneficiaries.

The highest Medicaid utilization for Providence St. Joseph Hospital out of the PQIs is Dehydration. Heart failure is the highest among the population aged 18-39 and those with Medicare. COPD is highest among 60-74 age range and Medicare Insurance. Unlike Providence Mount Carmel Hospital, Urinary Tract Infections are most prevalent among the 18 -39 age range and Commercial Insurance.

**Suicide and Self-Harm Events**

Due to suicide and self-harm being a concern from previous CHNAs, Providence looked at internal utilization data for related diagnoses based on in-patient and emergency department encounters for Mount Carmel Hospital and St. Joseph Hospital. Encounters between January 1, 2016 and December

---

\(^3\) [https://www.qualityindicators.ahrq.gov/modules/pqi_overview.aspx](https://www.qualityindicators.ahrq.gov/modules/pqi_overview.aspx)
31, 2018 are included in the report based on ICD-10 coding that include a diagnosis related to suicide or self-harm. In order to improve comparability of severity across ministries, encounters were normalized to a per 1,000 patient encounter basis.

The data shows a continual increase of self harm incidents resulting in Emergency Department usage with a decrease in those admitted to inpatient.

**Data Limitations and Information Gaps**

Due to the collaborative and consistent nature of the data we were measuring for community input, much of it was not broken down by various demographics. Demographic information may not be available for some measurements for trend analysis because of changes in definition and data collection. Due to the small population some data cannot be broken down further.

Focus groups were held in the evening hours versus lunchtime in previous needs assessments. There was a much lower turn out for these focus groups than in years past. This was supplemented with paper surveys where we had a good return.

Due to small numbers of patients with suicide and self-harm events, normalizing per 1,000 patient encounters may skew the results. For example, the 3.62 rate reported for St. Joseph Hospital in 2017 represents less than 4 events.
Process for gathering comments on previous CHNA
The CHNA was posted on the hospital website with information on how and who to inquire with to obtain copies and provide feedback.

SIGNIFICANT HEALTH NEEDS

The following needs were prioritized in the discussion group. Based on all of the input received through this assessment process, the following is the rank ordered list of significant health needs.

- **Support for youth and families**
  1. Address the cycle of poverty for families with substance abuse and mental health treatment access
  2. Homelessness including habitable dwellings
  3. Proper nutrition for children and families

- **Continuing care of the aging population**
  1. Gap in rural home health care needs and isolation
  2. Homelessness including habitable dwellings
  3. Proper nutrition for the aging population to help with chronic diseases.

- **Access to care**
  1. Immunizations
  2. Transportation
  3. Health education
     - Medicaid
Criteria description of prioritization utilized the following criteria can be found Appendix 4 of CHNA Report.

COMMUNITY ASSETS AND RESOURCES

There are a number of non-profit and for agencies and organizations working to address each of these community needs issues. Some are very specific to one area and others reach across the spectrum and are working in areas that would affect each of these identified needs. For a full list, see Appendix 5 of CHNA Report.

PRIORITY HEALTH NEEDS

Using the results from the community vote and grouping similar areas of work, the final three priorities for the Providence Stevens County Community Health Needs Assessment are:

1. Support for families and youth
2. Continuing care for the aging population
3. Increase access to care

**PROVIDENCE ST. JOSEPH HEALTH**

At Providence St. Joseph Health, we use our voice to advocate for vulnerable populations and needed reforms in health care. We are also pursuing innovative ways to transform health care by keeping people healthy, and making our services more convenient, accessible and affordable for all. In an increasingly uncertain world, we are committed to high-quality, compassionate health care for everyone—regardless of coverage or ability to pay. We help people and communities benefit from the best health care model for the future—today.

Together, our 119,000-plus caregivers/employees serve in 51 hospitals, more than 800 clinics and a comprehensive range of health and social services across Alaska, California, Montana, New Mexico, Oregon, Texas and Washington. The Providence St. Joseph Health family includes:

- Providence Health & Services across five western states
- St. Joseph Health in California and Texas
- Covenant Health in West Texas
- Facey Medical Foundation in Los Angeles, CA.
- Hoag Memorial Presbyterian in Orange County, CA.
- Kadlec in Southeast Washington
• Pacific Medical Centers in Seattle, WA.
• Swedish Health Services in Seattle, WA.

Providence Health & Services and St. Joseph Health came together as Providence St. Joseph Health in 2016. As a combined organization, we are serving more people, advancing best practices and continuing our more than 100-year tradition of serving the poor and vulnerable. Delivering services across seven states, Providence St. Joseph Health is committed to touching millions of more lives and enhancing the health of the American West to transform care for the next generation and beyond.
2019 CHNA GOVERNANCE APPROVAL

This community health needs assessment was adopted on September 25, 2019 by the Community Ministry Board of Providence Health Care. The final report was made widely available\(^4\) on [date].

Elaine Couture  
Executive VP/Region Chief Executive, Washington/Montana

OVERVIEW
Stevens County Indicators Summary provides data demonstrating the health status of Stevens County residents and some individual risk behaviors that contribute to health outcomes. The indicators in this report are used to monitor the population’s health and are updated as new data becomes available.

Stevens County Indicators Summary demonstrates changes within Stevens County over time and, when available, make comparisons between Stevens County, Washington State, and the United States. Additionally, lower socioeconomic status is often associated with poorer health outcomes. When available and appropriate, health indicators were analyzed by age, sex, race, education, and income to identify disparities.

The information in this document provides the community and local agencies information on health issues and affected populations. The information may help direct health and social interventions to areas of greatest need and build support for health policies, as well as educate the public, community organizations, and policymakers on the community’s health and well-being.

Up-to-date data, reports, and other information can be found at countyhealthinsights.org/county/stevens.
ENVIRONMENTAL
Food and waterborne disease ............... Disease rate for campylobacteriosis, E. coli, giardiasis, listeriosis, salmonellosis, and shigellosis.
Well water ...................................... Proportion of population using a private water system.

HEALTH BEHAVIOR
Binge drinking (adult) ......................... Percent of adults who binge drank in the last 30 days (5+ for men, 4+ for women).
Binge drinking (youth) ....................... Percent of youth who had 5+ drinks in a row in the last 2 weeks.
Breastfeeding .................................. Percent of births where the mother initiated breastfeeding.
Fruit and vegetable intake (youth) ........ Percent of youth who ate fruit and vegetables 5+ times per day.
Illicit drug use (youth) ....................... Percent of youth who used illicit drugs in the last 30 days.
Marijuana use (youth) ....................... Percent of youth in grades 6, 8, 10, and 12 who have used marijuana one or more times in the last 30 days.
Maternal smoking ............................... Percent of births where the mother smoked during pregnancy.
Physical activity (adult) ..................... Percent of adults doing 150 minutes or more of physical activity per week.
Physical activity (youth) ..................... Percent of youth physically active 60 min/day on 5+ days per week.
Smokers (adult) ................................. Percent of adults who smoke cigarettes.
Smokers (youth) ................................. Percent of youth who smoke cigarettes.

HEALTH CARE
Dental check-up ................................ Percent of adults who visited the dentist in the last 12 months.
Insured (adult) ................................. Percent of residents currently with medical insurance.
Mammogram .................................... Percent of women 40 years of age or older who have had a mammogram in the last year.
Personal doctor (adult) ...................... Percent of adults with a personal doctor or healthcare provider.
Sigmoidoscopy/colonoscopy ................ Percent of adults 50+ years of age who have ever had a colonoscopy or sigmoidoscopy.

HEALTH STATUS
Asthma (youth) ................................. Percent of youth who currently have asthma.
Cancer .......................................... Incidence of new cases of cancer.
Childhood disability ......................... Percent of children with a disability.
Depression (youth) ............................ Percent of youth who felt so sad or hopeless almost every day for 2 weeks or more in a row, that they stopped doing some of their usual activities.
Diabetes (adult) ............................... Percent of adults who have been diagnosed with diabetes.
Food insecurity (youth) ...................... Percent of youth who had to skip or cut the size of a meal in the last year.
General health (adult) ....................... Percent of adults reporting their general health status as excellent or very good.
Obesity (adult) ................................. Percent of adults with a BMI=30+.
Overweight (youth) ............................ Percent of youth that are overweight or obese.
Poor mental health (adult) .................. Percent of adults with 14+ days of poor mental health in the last 30 days.
Serious mental illness ....................... Percent of adults who scored 10 or more on the Kessler 6 questions to identify serious mental illness.
Stroke (adult) ................................ Percent of adults that ever had a stroke.
INFECTIOUS DISEASE
Drug resistant infection ................................ Rate of inpatient hospitalizations with infection with drug-resistant microorganisms (V09 and MRSA, diag 1-9).
Flu shot (adult) .................................................. Percent of adults who received a flu immunization in the last 12 months.
Preschool immunization .................................. Percent of children 19-35 months of age with complete vaccination records on file in the Child Profile Immunization Registry (4-DTP, 3-Polio, 1-MMR, 3-Hib, 3-HepB, 1-Varicella, 4-PCV).
School age immunization ............................... Vaccination personal exemption rate among school age children.
Sexually transmitted diseases ....................... Rate of reported cases of chlamydia, gonorrhea, syphilis, and human immunodeficiency virus.
Teen immunization .................................... Percent of youth 13-17 years of age with complete vaccination records on file in the WA Immunization Information System (WAIIS) (1-Tdap, 1-MCV, 1-HPV).
Vaccine preventable diseases ........................ Rate of cases of haemophilus influenza, acute hepatitis A, acute hepatitis B, measles, mumps, pertussis, rubella, tetanus, and meningococcal disease.

INJURY AND VIOLENCE
Bullied (youth) ................................................. Percent of youth that have been bullied in the last 30 days.
Child abuse ..................................................... Rate of accepted CPS referrals for abuse or neglect among children 0-17 years of age.
Domestic violence .......................................... Rate of DV offenses reported to law enforcement.
Falls .......................................................... Rate of hospitalizations for a fall.
Physical abuse (youth) .................................... Percent of youth who report an adult ever physically hurt them on purpose (like pushed, slapped, hit, kicked or punched you), leaving a mark, bruise or injury.
Suicide ........................................................ Rate of deaths from suicide.
Unintentional injury ....................................... Rate of unintentional injury hospitalizations.

REPRODUCTIVE HEALTH
Abortion .......................................................... Percent of pregnancies that are terminated by an induced abortion.
Low birth weight ............................................ Percent of births with a birth weight <2500g.
Pregnancy ...................................................... Rate of births, abortions, and fetal deaths.
Preterm birth.................................................. Percent of births with an estimated gestation age <37 weeks.

SUMMARY MEASURES OF HEALTH
Deaths .......................................................... Rate of deaths from all causes.
Life expectancy ............................................. Number of years an individual is expected to live from birth.
Years Potential Life Lost Age 65 ..................... Number of years of potential life lost due to death before age 65 years.

Narrative
Meeting locations were secured by signed contracts with the owning agencies: Public Libraries of Northport, Kettle Falls and Colville as well as the Chewelah Senior Center. The Senior Center charged $40.00 for access to the room. The Libraries waived the rental fee due to the Not-for-Profit status of Providence Healthcare Stevens County Ministries. Light meals were ordered for attendees from Subway Sandwich shops and the rooms were prepared thirty minutes prior to the Focus Group beginning.

The room set up included tables and chairs, clustered together in order to view the slide presentation. Posters were hung on the walls, which indicated the following: meeting agenda, data gathered from Providence's questionnaire (questions 1 and 2 only), Tri-County Health District's Health Indicators, and a blank poster wherein participants could post additional concerns.

All Focus Group meetings began and ended on time. Meetings began by the agenda being reviewed, followed by a sign in sheet reminder, and introductions of all participants stating their name, group affiliation, how long he/she has resided in Stevens County and why they are attending the Focus Group. The meeting next reviewed the data which included: the reason and purpose of community health needs assessments for not-for-profit organizations, high level facts pertaining to Providence St. Joseph Health, Medicaid and Medicaid & Medicare patient data pulled from ED visits to Providence Mount Carmel Hospital and Providence St. Joseph's Hospital in 2018.

Next, demographic data collected from the Tri-County Health District, Spokane Regional Health Department and the ACS research was presented. Slides of this data included: population by age group, race and spoken language at home; family structure; education levels of completion; percentages of uninsured by age and gender comparing Stevens County to Washington State; Income and Poverty level statements; Federal Poverty Level (FPL) estimates including: Families with Children below 100% of the FPL, Race & Ethnicity percentages below FPL; Employment statements of amounts and occupation breakdown; and Housing availability and quality statements. The slide presentation ended by addressing the Stevens County Indicator Data showing the top indicators contributing to Risk Behaviors and Poor Health Outcomes.

Next, participants were provided with five of each color round stickers: pink, green and orange to use as prioritization "votes". Participants then placed all five green stickers on any of the "Health Concerns" identified through the Providence questionnaire. Next, participants did the same for the pink stickers for the identified Concerns Affecting Health gathered through the Providence questionnaire. Finally, participants place the five orange stickers on the Top Indicator List contributing to Risk Behavior and Poor Health Outcomes as listed by the Tri-County Health District and the Spokane Regional Health District.
Participants were then asked to speak to any health concerns/indicators that were not listed so as to identify any gaps present, in their mind/s. Finally, all participants were thanked and the Focus Group meeting closed. Rooms were cleaned, returned to original set up, doors were locked and keys returned.

2019 CHNA Questionnaire Responses
Visual Data Display

Demographic Data

There were 89 respondents who answered some or all of the questions of the CHNA Questionnaire, 2019. The questionnaire included five questions and an optional opportunity to share personal, but general information. The questions included:

1. What are the main physical, mental, and/or social health concerns that affect you, your family and the community in Stevens County?
2. What are the health related services that you travel more than an hour to receive?
3. What are the most important factors that affect the health of people in Stevens County?
4. What worries you most about your health?
5. What is the best part of living in Stevens County?

The generalized, personal information asked if the respondent was employed, if he/she had health insurance, and asked for contact information of: name, address, phone, email.

89 respondents self-identified as the following:

- Leadership of Providence Stevens County Ministries: 6/89 = 7%
- RN’s of Providence Stevens County Ministries: 2/89 = 2%
- Physicians employed by Providence Stevens County Ministries: 3/89 = 3%
- Independent physicians: 1/89 = 1%
- Employees of Rural Resources: 10/89 = 11%
- School Superintendents/Principals: 1/89 = 1%
- Hunger Coalition employees and representatives: 7/89 = 8%
- Member of the Providence Stevens County Ministries Board: 2/89 = 2%
- Local librarian: 1/89 = 1%
- Local Ministers: 3/89 = 3%
- Retired 9/89 = 10%
- Not Disclosed: 31/89 = 35%
- Unemployed: 13/89 = 15%
General Categories of Respondents

Physicians: 4/89 = 4%
Providence Stevens County Ministries Caregivers: 8/89 = 9%
Providence Members of the Board: 2/89 = 2%
Community Members: 44/89 = 50%
Undisclosed: 31/89 = 35%
**Questionnaire results are listed according to “Categories” that emerged from the collected data.**

What are the main physical, mental, and/or social health concerns that affect you, your family and the community in Stevens County?

**Total Responses: 191**

**Response Categories:**

- Availability of Physical Care: 22/191 = 12%
- Availability of Mental/Behavioral Care: 29/191 = 15%
- Drug abuse/Addiction Recovery Availability: 19/191 = 10%

Prioritization Protocol and Criteria

Appendix 4: Prioritization Protocol and Criteria

- Input from the community
- Severity (i.e., impact at individual, family, and community levels)
- Size/magnitude (i.e. number of people per 1,000, 10,000 or 100,000)
- Disparities of subgroups
- Ability to impact
Community Resources Available

Appendix 5: Existing Health care Facilities in the Community to address significant health needs

North East Washington Health Centers:
- **Chewelah Community Health Center**, 518 E Clay Avenue, Chewelah, WA 99109
- **Colville Community Health Center**, 358 N Main Street, Colville, WA 99114
- **Kettle River (Orient) Community Health Center**, 141 Third Avenue, Orient, WA 99160
- **Lake Spokane (Nine Mile Falls) Community Health Center**, 5952 Blackstone Way, Nine Mile Falls, WA 99026
- **Loon Lake Community Health Center**, 3994 Colville, Road, Loon Lake, WA 99148
- **Northport Community Health Center**, 411 Summit Avenue, Northport, WA 99157
- **Selkirk (Ione) Community Health Center**, 208 CedarCreek Terrace, Ione, WA 99139
- **Springdale Community Health Center**, 114 S Main Street, Springdale, WA 99173
- **Aloha Integrative Medicine**, 265-485 East Third Avenue Suite B, Kettle Falls, WA 99141
- **David C. Wynecoop Memorial Clinic, aka Wellpinit Service Unit, Indian Health Service**, 6203 Agency Loop Road, Wellpinit, WA 99040

Appendix 6: Health Care Shortage Areas

**Health Professions Shortage Area — Stevens County**

The Federal Health Resources and Services Administration designates Health Professional Shortage Areas as areas with a shortage of primary medical care, dental care, or mental health providers. They are designated according to geography (i.e., service area), demographics (i.e., low-income population), or institutions (i.e., comprehensive health centers). The maps below depict these shortage areas relative to Providence Mount Carmel Hospital and Providence St. Joseph Hospital locations. Click on the link below for full sized versions. Overall, Stevens County has shortages in each of these areas with both Primary care and Mental Health providers needed for the general population and the low-income population and dental providers are needed for the low-income population.

Medical Underserved Area/Medical Professional Shortage Area

Medically Underserved Areas and Medically Underserved Populations are defined by the Federal Government to include areas or population groups that demonstrate a shortage of healthcare services. This designation process was originally established to assist the government in allocating community health center grant funds to the areas of greatest need. Medically Underserved Areas are identified by calculating a composite index of need indicators compiled and with national averages to determine an area’s level of medical “under service.” Medically Underserved Populations are identified based on documentation of unusual local conditions that result in access barriers to medical services. Medically Underserved Areas and Medically Underserved Populations are permanently set, and no renewal process is necessary. The map below depicts the Medically Underserved Areas/Medically Underserved within Stevens County. Click on the link to view the full sized version.
